

Full network: 6 pairs, 5 time windows

dot = active in that window; bigger dot = more events

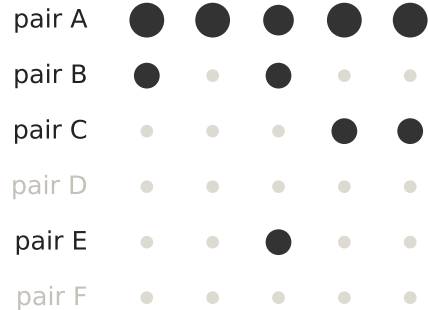

true p_2 = 3 of 6 pairs active in ≥ 2 windows = 50 %

R · random nodes

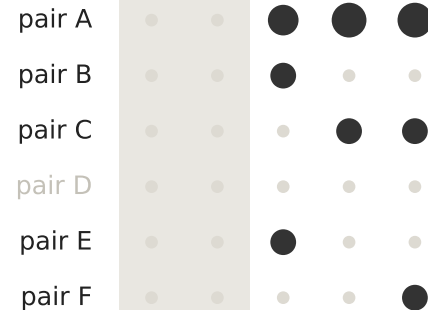

only pairs between drawn nodes
naive share = 2/4 = 50 %

S · random walk

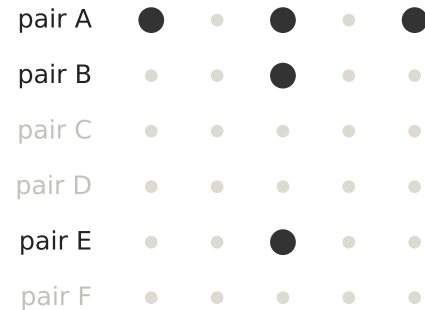

the walk mostly meets busy pairs
naive share = 3/4 = 75 %

H · late time only

windows 1-2 hidden (node sampling not shown)
naive share = 2/5 = 40 %

B · event loss

most events are lost
naive share = 1/3 = 33 %
