

pair active in 1 window
 in 2-3 windows
 in 4-5 windows

Full network

true $p_2 = 3/6 = 50\%$

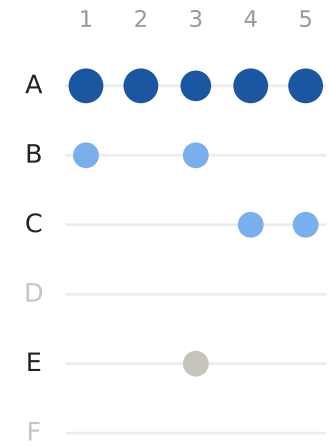

R · random nodes

naive share = 2/4 = 50%

only pairs between drawn nodes

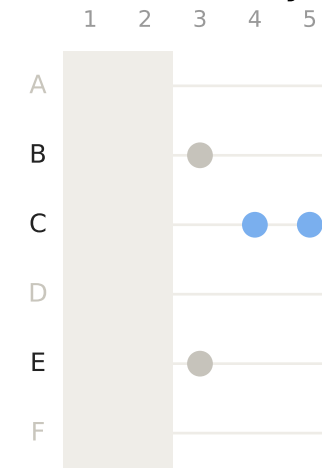

S · random walk

naive share = 3/4 = 75%

busy pairs are met more often

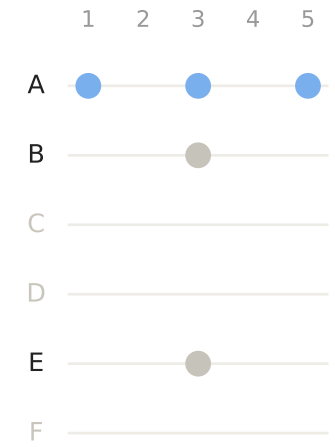

H · late time only

naive share = 1/3 = 33%

same nodes, windows 1-2 hidden

B · event loss

naive share = 1/3 = 33%

most events are lost

columns: the five time windows · bigger dot = more events
